

Pendant with bulb crystal stands

1. Remove the fixture from its original packaging. Remove the canopy mounting plate from within the canopy and attach to the junction box using the two screws provided in the hardware pack.
2. Select the desired length you would like the fixture to hang (42" maximum). Use the 3 x 12" rods and 1 x 6" rod to each wire (or less depending on your desired length). Push the wires through the rods attaching them male to female ends of the rods. After the rods are attached push the wires through nipples on the canopy and attach the canopy by screwing the male end of the rods into the female connectors on the canopy (do not over tighten).
3. Once your fixture is completely together you can now attach the fixture to the mounting plate which is attached to the junction box. First attach all wiring with the provided marrets (white to white, black to black & ground to ground). Align the two holes from the canopy to the two screws pointing down from the mounting plate. Push the screws through the canopy plate so they are poking through, once this is complete you can screw on the decorative nuts until tight.
4. Now that your fixture is securely installed you can attached all the crystals strands inside the fixture, 83 stands on the outer rim and 48 strands in the inner rim. Simply hook each strand into the tiny whole circling the top of the frame.
5. You have now completed the installation of you fixture, please enjoy.

START FROM HERE

- Before assembling lighting fixtures, make sure you have electrical experience or have your fixture installed by a qualified licensed electrician.
- Prepare everything in clear area.
- Put on gloves all the time during this installation.
- Read instructions carefully before you assemble.
- Keep this instruction sheet.
