

1.

Remove the fixture from its original packaging. Remove the canopy mounting plate from within the canopy and attach it to the electrical junction box on the ceiling using the two screws provided in the hardware package.

2.

Select the desired length you would like the fixture to hang down from the ceiling (42" maximum / 6" **Minimum**). Assemble the 3 – 12" rods and the 1 – 6" rod in a combination that comes closest to your predetermined desired length. Connect the rods by threading the male end of the rods into the female ends of the rods. Then attach the rods to the socket by screwing the male end of the rods into the female connector on the socket, make sure to feed the wires through the center of the male end of the rods until the wires come out the opposite female end. (**2a**) Before attaching the rods to the canopy, make sure to install the fixture glass by inserting the rods through the hole in the center of the bracket in the middle of the glass. (**2b**) When the glass is in place, push the wires through the nipple on the canopy and attach the rods to the canopy by screwing the female end of the rods into the male connector on the canopy (do not over tighten).

3.

Once your fixture is completely together you can now attach the canopy to the mounting plate, which is attached to the electrical junction box on the ceiling. First attach all wiring with the provided marrets (white to white "N", black to black "L", ground to ground "G"). Align the two holes from the canopy to the two screws pointing down from the mounting plate. Push the screws through the canopy plate so they are poking through, once this is complete you can screw on the decorative nuts until tight.

4.

Now that your fixture is installed you can install the A-15 light bulb of the correct wattage. (**4a**) To install the bulb, gently slide the fixture glass up the rods until you can safely access the lamp socket, install the bulb, then lower the fixture glass down until it gently comes to rest evenly on the lamp socket.

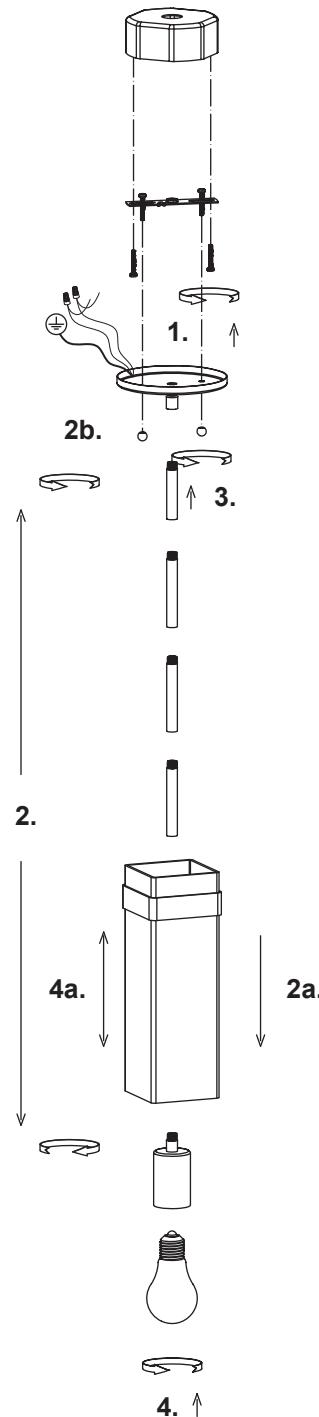

5.

You have now completed the installation of your fixture, please enjoy.

START FROM HERE

- Make sure power is completely off at the fuse box.
- Have your fixture installed by a qualified licensed electrician
- Prepare everything in clear area.
- Wear gloves at all times during this installation.
- Read instructions carefully before you start assembly.
- Keep this instruction sheet for future reference.
