

FOLLOW THE **light**

Experimentations with sculptural form and technical advancements represent a new era of lighting design and innovation.

Magellan | **KUZCO LIGHTING**

This statement piece was a multiple award-winner this year, including a Red Dot Best of the Best in lighting design, and Most Innovative Product of the Year at LightFair, and deservedly so. A dramatic focal point for any large interior, multiple spun-aluminum shades surround a hollow core in a static orbit. Indirect light is cast onto the shade interiors, creating an even, ambient glow, and each shade is an individual light source that can be mixed or exchanged. www.kuzcolighting.com

Lily | **EUREKA**

This ceiling suspended luminaire has a flexible 180° vertical pivot and 350° rotation around the vertical axis, controlled by a friction hinge ensuring the selected angle is maintained without slipping. Lambertian-type diffusion is delivered using an optical grade translucent acrylic lens and internal reflector, with outputs of 900 or 1,200 lumens. The organic shape is finished with architectural grade matte fine textured paint in one of five standard colours, and comes with an adjustable single cable suspension, but also has canopy mounting or track system options.

Hollowcore | **LUMINIS**

This reinterpretation of the traditional high bay pendant shape comes with a unique circular LED light engine and open centre concept and is available with either a high-efficiency diffuser or aluminum reflector. The pendant model features either an elegantly sculpted tripod interior stem or clean cable mounting. An independently controlled upright component is available to provide additional upward illumination or to highlight ceilings. www.hollowcore.luminis.com
